CrimeTracker API Document

https://www.justice.gov/developer
- Provides a list of different API's that could be used, I believe the FBI Crime Data API is the best one for us.

https://cde.ucr.cjis.gov/LATEST/webapp/#/pages/docApi
- This is the FBI Crime Data API which offers comprehensive crime data that has been collected across the United States. It is unique in that it offers detailed breakdowns of the incidents, arrests, offenses, and equipment data from law enforcement agencies around the nation. It is free but unfortunately does not provide any geo coordinates.

https://blog.spotcrime.com/2019/03/the-spotcrime-api.html
- This is SpotCrimes API, their entire website seems like what our end goal is looking like. From what it looks like, their API is not free but they do provide contact information. We could maybe contact them and see if they could provide us with some sort of free version or an alternative since we are only using it for class. They are unique in that they do provide accurate geo coordinates for each crime.

https://www.crimeometer.com/
- Crimeometer offers a variety of different API's including Crime Data API, Crime Map API, and an Embedded Crime Map. They provide real-time crime data as well as historical crime data, along with precise geo coordinates. Unfortunately they also require some sort of subscription / payment. Similar to SpotCrime, we might be able to get it for free if we contact them and tell them it is for class.
